

Trouble Accessing the 3DSMART Database?

If you start 3DSMART and get this error message: **“User might not have sufficient privileges”**, it means the user role is not setup correctly in the SQL Server database.

To grant user access to the database:

- 1) As an administrator, connect to the database by running the **SQL Server Management Studio Express**
- 2) After logging in, add user's name in the "Logins" list
- 3) Ensure that each user of 3DSMART has access to all of PROCAD's databases in the **User Mapping** section
- 4) Check off all PROCAD databases for the user
- 5) Save changes

You will now have access to connect to the SQL database.
